Comprehensive Results Page

Results are printed in easy to understand format with measurement comparison to the healthy range, making analysis fast and concise.

❶ Body Composition Analysis
Shows the measurement results and normal range of total body water, protein, minerals and body fat which equal total body weight.

❷ Muscle / Fat Analysis
Graph shows results for weight, skeletal muscle mass, and body fat mass compared to normal range.

❸ Obesity Analysis
Graph shows body mass index and body fat percentage, compared to healthy range important indicators of obesity.

❹ Abdominal Obesity Analysis
The fat of the human body consists of subcutaneous fat and visceral fat. This analysis assesses visceral fat that are closely related to adult diseases by using various indicators.

❺ Segmental Lean and Fat Analysis
Graph shows muscle mass and fat mass of each of the five body parts (left arm, right arm, left leg, right leg, and torso).

❻ Body Composition Change
Historical graph of weight, skeletal muscle mass, and body fat mass, important indicators to assess progress.

❼ Comprehensive Evaluation
Shows body type, body age, basal metabolic rate, calories needed per day, body cell mass, visceral fat mass, degree of obesity.

❽ Body Balance Assessment
Assessement of the balance between the left and right of the body, and the upper and lower parts of the body. It evaluates whether the body maintains balance between the left and right of the body and the upper and lower parts of the body, rather than about the mass of skeletal muscle or fat.

❾ Control Guide
Extracellular water ratio indicates the ratio of extracellular body water to total body water. This index evaluates the body's water balance and displays the body's current state as normal, boundary, or abnormal.

❿ Segmental Lean Mass
Muscle mass and status of the five body parts (left arm, right arm, left leg, right leg, torso) compared to the standard weight.

⓫ Impedance
Indicates impedance by frequencies and by body parts. Impedance is a resistance generated when electric current passes through the body. Each person has a unique impedance.

⓬ Blood Pressure Analysis
Shows the blood pressure data when the device is connected to the hematomanometer provided by ACCUNIQ. This is especially useful because it assesses your obesity level and blood pressure at the same time.
